RE: Expert Statement Regarding SCRS Fellow Membership Evaluation Process and Selection Standards

My name is Dr. Jagdish Chand Bansal, and I am the Chairperson of the SCRS Fellow Membership Steering Committee of the Soft Computing Research Society (SCRS).

I submit this letter to clarify the evaluation standards, governance framework, expert-review mechanism, and selection process governing the SCRS Fellow Membership program of the Soft Computing Research Society (SCRS)..

The Soft Computing Research Society (SCRS) is a registered professional and academic society dedicated to promoting excellence in research, innovation, and professional advancement in Soft Computing and allied technological disciplines. SCRS established its Fellow Membership program to recognize select academicians, scholars, researchers, and industry professionals who have demonstrated exceptional expertise, substantial scholarly accomplishments, and sustained contributions within their respective fields.

The SCRS Fellow Membership is not a general or fee-based membership category. Rather, it is a selective recognition awarded only after rigorous academic and professional evaluation. The governing bylaws expressly provide that eligibility for the Fellow grade requires:

- A substantial body of high-impact research, publications, patents, and technological advancements;
- Significant professional impact and leadership;
- Peer recognition within the computing and technology community; and
- Contributions to major advancements in the field.

Further, the SCRS bylaws and governing resolutions establish that the nomination and evaluation process is rigorous, transparent, and merit-based. Candidates are assessed through detailed review of their academic achievements, scholarly publications, technical works, innovation, leadership contributions, and professional accomplishments.

Importantly, applications for SCRS Fellow Membership are reviewed by the SCRS Fellow Steering Committee and Selection Panel, which consist of recognized academicians, senior researchers, and industry experts with substantial standing in the international scientific and technological community.

Other than me, the Steering Committee currently includes:

- Dr. Meng-Hiot Lim – Nanyang Technological University (NTU), Singapore
- Dr. Shahid Hussain – University of Canberra, Australia
- Dr. Sandeep Kumar – Christ University, India

Soft Computing Research Society

New Delhi, India

Registered under the societies registration act XXI of 1860

-
- Mr. Manjunatha Sughaturu Krishnappa – Oracle America Inc., United States

These individuals collectively possess extensive records of international scholarly publication, editorial service, academic leadership, scientific innovation, and technological contribution. Their expertise enables them to competently evaluate whether applicants have achieved the level of distinction necessary for recognition as SCRS Fellows.

The SCRS Fellow evaluation process specifically includes review of submitted research papers and technical works to assess originality, impact, scholarly significance, and relevance to the advancement of the field. The committee conducts substantive academic and professional review before making recommendations to the SCRS Governing Body for final approval.

Moreover, SCRS amended its fellowship policies in March 2025 to clarify that the SCRS Fellow distinction is awarded solely on the basis of academic excellence, research achievement, intellectual merit, innovation, and professional contribution. The amended resolution expressly provides that the distinction is “bestowed purely on intellectual merit, innovation, and scholarly contribution.”

In my capacity as Chairperson of the Steering Committee, I can affirm that the evaluation process for SCRS Fellow Membership is selective and based upon demonstrated distinction in the field rather than ordinary professional participation. Only candidates exhibiting sustained scholarly achievement, impactful contributions, and recognized professional standing are considered suitable for this distinction.

Based upon the Steering Committee’s review of applicants’ academic qualifications, professional accomplishments, research contributions, innovation, leadership, and overall impact within the field of technology and computing, only candidates satisfying the rigorous standards established under the SCRS Fellow Membership framework are selected for recognition as SCRS Fellows.

I respectfully submit this statement to clarify that SCRS Fellow Membership is awarded through a merit-based evaluation process conducted by recognized experts and distinguished professionals within the relevant scientific and technological disciplines.

Please feel free to contact me should further clarification be required.

Warm regards,

Dr. Jagdish Chand Bansal, Ph.D. (IIT Roorkee, India)

President
